Dual-Target Docking: Draft Report

Automated Pipeline

2026-02-04

Abstract

We report preliminary dual-target docking results using FREED++ generation [1] and Boltz-2 scoring [2]. This draft summarizes hit-rate and balance statistics for the CDK2/ERK2 pair.

Methods

Molecules were generated with FREED++ in three modes (single_a, single_b, double) and scored with Boltz-2. Normalization and diversity checks were applied prior to statistical testing.

Results

Mode	HR_A (mean ± SEM)	HR_both (mean ± SEM)	Balance (mean ± SEM)
single_a	- ± -	- ± -	- ± -
single_b	- ± -	- ± -	- ± -
double	- ± -	- ± -	- ± -

Table 1: Hit-rate summary for CDK2_ERK2.
